GR Lane

Drive Computing, the Yorkshire-based software house specialising in business information systems for the process industry, has announced a £170,000 order from G R Lane Health Products for the BLISS business control software. The new system will be used to improve control of manufacturing, distribution, financial, purchasing and quality activities in the company.

G R Lane employs 100 people and is based in Gloucester. It manufactures natural-based pharmaceutical products, nutritional supplements and herbal medicines, such as Olbas Oil and Kalms, which are sold through chemists and health food shops in the UK and 50 countries throughout the world.

Drive Computing was invited to tender for the system by Stratford-Upon-Avon based Computer Consultants Limited, and the BLISS system was short listed with Ross's Promix and SSI's BPCS. BLISS was chosen for its high functionality, full GUI and Drive's fresh approach.

The company's Financial Director Derek Humphrey said: "Our previous 10 year old system was showing it's age and we needed a fully integrated package that also provided more management information. BLISS is also being used by other companies in our industry and meets the guidelines of the Medicine Control Agency, which is important to us. Drive's system also met our budget constraints whilst providing a solution to our needs. The system will help us to meet our inventory reduction targets and to establish EDI links with our suppliers and customers."

If you would like to know more about how a recipe of strong partnership, specialised software and innovative management could help you please contact us for a FREE initial consultation.

Drive Computer Services was formed in 1983 to provide computer systems and consultancy to the process industry. Today, the company is a systems supplier providing solutions to its key manufacturing market sectors of Foods, Chemicals, Pharmaceuticals, Blending, and Lubricants.

BLISS is the original integrated manufacturing management system for the process industry. It provides a complete solution for companies operating in highly competitive markets that need to be responsive to their customers and meet increasing legislative demands.

In many aspects of life the original idea is often the best. This is so with BLISS, the resource planning solution designed and developed by Drive Computer Services specifically for the process industry.

Since the early 1980's BLISS has been helping process companies meet key business objectives such as:

- Maintaining competitive edge
- Improving customer service
- Enhancing product quality
- Protecting investment

Many famous world-wide brand manufacturers use BLISS as the profit catalyst to control and maintain the quality and excellence of the products and services for which they are renowned.

BLISS is "the name behind the names"
